

"Advanced sorting and grading lines for quality control"

In the last decade, market's demands for quality fruit have set very high standards.

The top markets want "super" clean, sanitize and very uniform fresh produce and are willing to pay extra for a supreme product.

Climbing labor cost are also contributing to the needs to find "hands free" fruit handling and sorting.

Advanced optical technology and NIR technology, provide the tools for dramatically improve fruit sorting.

Along with a continuous research on post harvesting technology, we can provide an easy to use and economy solutions for the advanced packinghouses.
